Managing our health care system offers not only exciting new employment prospects, but also provides executives and emerging managers the opportunity to prepare for current and future industry challenges. Healthcare delivery today is confronting transformative changes that demand only the most skilled managers. Its future brings diverse opportunities and rich potential for those strategic thinkers with the right preparation.

The Executive MHA program is designed specifically for working professionals in a wide range of health and health-related professions -- from hospitals and managed care facilities to consulting, law, insurance and more. The MHA program will provide the skills, competencies, and relationships to resolutely deal with today’s shifting health care environment and embrace the promises of the future through a rigorous practitioner oriented graduate program.

A flexible, cohort-based two-year program, the Executive program will engage participants as peer mentors and collaborators, working with and under the direction of accomplished Rutgers faculty. The curriculum represents a range of high level leadership competencies, delivers a deeper understanding of the unique requirements of the health care industry, and provides a dynamic and focused study of the business acumen necessary for success.

The 45 credit curriculum (39 academic credits + 6 credits of advanced practicum) is designed to comply with CAHME accreditation standards. It is also flexible as it integrates in person Saturday classes with online team building and interactive exercises. Faculty includes senior leaders from the health care industry who will mentor and nurture our students throughout the entire program.

Application Requirements for the Executive Program

- Applicants should have a BS, BA, or related degree with at least 5 years of healthcare experience (as broadly defined). Although an undergraduate grade point average of 3.0 or better is preferred, the nature of the Executive program is to focus on professional development of individuals and accomplishments since completing the undergraduate degree. Accordingly considerable weight is assigned to peer and supervisory recommendations.

- The GREs or GMATs are not required if applicant has five or more years of experience.

- Two letters of recommendation are requested. The first should be a strong letter of recommendation from your employer. The second should help amplify the applicant’s academic potential or other qualifications that may set the candidate apart from others. Both letters should speak to a strong work ethic, professionalism, leadership potential, motivation and high ethical standards.

Why Pursue An MHA Degree?

The vast majority of senior leadership positions in healthcare require an advanced degree and a Masters in Health Administration is a perfect choice because it:

- Assures the foundation for growth and advancement in your career. Today’s healthcare industry requires advanced knowledge and skills to succeed and grow in your career.

- Aligns business training with the specialized knowledge and skills needed for success in the healthcare industry so you have all the tools needed for success.

- Fosters critical thinking and innovative problems solving to deal with the complex problems facing healthcare today

- Supports a wide range of disciplines, roles and organizations so careers are flexible and opportunities varied

- Allows you to make a real difference in people’s lives.

About the Bloustein School

Edward J. Bloustein, a former Rutgers president, constitutional scholar, active citizen, philosopher and teacher, lived a life of civic engagement. The Edward J. Bloustein School of Planning and Public Policy was established in his honor in 1992 and has emerged as one of the nation’s key centers for the theory and practice of scholarship and analysis related to the fields of planning and public policy, public health and health administration.

Graduate Programs

The Bloustein School offers graduate degrees of study in urban planning (MCRP, MCRS), public policy (MPP, MPAP) and a masters in health administration degree (MHA). It educates a highly select pool of students, preparing them for public and private sector careers, teaching and research professions, and public service.
